

## **Prenatal Laboratory Genetic Counselor Position for North Carolina Full- or Part-time**

**Start Date:** Immediately

**Location:** Chapel Hill, NC

**Job Title:** BC/BE Prenatal Genetic Counselor

GeneCare Medical Genetics Center has an opening for a full- or part-time prenatal laboratory genetic counselor to join our North Carolina team. The successful candidate will have a Master's degree in genetic counseling from an accredited graduate program, the ability to thrive independently and as part of a team, and strong organizational and interpersonal skills. Experience in prenatal counseling is preferred, but not required. New graduates are welcome to apply!

Job responsibilities include: specimen coordination for in-house testing and special study testing; reviewing patient information; communicating lab results to patients and physicians; coordinating follow-up care and appropriate referrals; providing consults and prenatal genetic counseling as needed; participating in educational training conferences; acting as a genetics resource to the medical community; and maintaining excellent client and internal communications.

GeneCare is a comprehensive genetics center with counselors in North Carolina and other states. This position provides a unique opportunity to work independently at the Center, while taking part in the benefits of a larger team of counselors. In addition to traditional genetic counseling responsibilities, this position includes participation in national nuchal translucency training courses with physicians and sonographers. We offer a competitive salary and benefits package.

If interested, send your resume and cover letter (including salary requirements) to Aimee Kirkman - [akirkman@gene care.com](mailto:akirkman@gene care.com) or mail to:
